

Mississippi State University Test Results 2010

Pam and James Barr picked over 1,000 lbs in one thankful, yet exhausting day. James and Pam have owned Barr Farms, a family dairy, for over 30 years and decided last year to grow their family garden into one for resale purposes.

Moving forward with their vision, they purchased a 30 by 96 foot high tunnel last fall with a cost-share from the Natural Resources Conservation Service that stipulated that all produce must be grown using organic methods. Pam chose to use only Tall Harvest Organic, SumaGrow inside. She expected good results, but was concerned what the extreme heat would do to this year's crop. But "we've never had this kind of production before. It's amazing the difference this product makes. I picked a 25 lb box of tomatoes off one plant in one day!"

Michigan State University had great success in greenhouse studies in 2009.

MSU had Increases in yield, Higher Brix levels, and Heavier Tomatoes.
